26 - 27 November 2009 | Berchtesgaden and Oberpfaffenhofen, Germany

Company Mission to GALILEO / GATE and Galileo Control Centre

Invitation

GATE (Galileo Test and Development Environment) is the only open-air test and development site for ground-based Galileo applications in the world.

GATE will generate the final protocols and realistic signals before Galileo will be operable in the orbit. This is necessary for the testing of Galileo-based devices and related applications.

In GATE, small- and medium-sized enterprises and institutes will be able to test and to certify their devices and applications early enough to become first-mover in the emerging Galileo market.

In addition, the company mission will inform the participating companies and institutes of existing applications and ongoing projects, the time-scale of Galileo as well as the conditions and procedures of testing and certification.

The company mission is organised by Bayern Innovativ GmbH together with bavAIRia e.V. and will lead to the GATE Test area in Berchtesgaden and the Galileo Control Centre in Oberpfaffenhofen.

In the context of the Enterprise Europe Network, the company mission aims at the network partners and their clients in a broad range of application areas: automotive, aviation, healthcare and medical devices, security, information and communication technologies, tourism and others.

The EU Co-operation Unit of Bayern Innovativ GmbH as well as bavAIRia e.V. are looking forward to welcoming you in Bavaria.
